Introduction

第一章 测试

定理 1.0.1 (直线定理). 直线方程可以写为:

$$y = mx + b$$

我们将通过三个步骤定义可测函数的积分。首先定义非负简单函数的积分。以下设 E 是 $\mathcal{R}^n$ 中的可测集。

This file is a sample book demonstrating Quarto's capabilities with the standard LaTeX book document class. It supports PDF (via LaTeX) output. It is assumed that the reader has a basic working knowledge of stochastic calculus Karatzas and Shreve [1] and stochastic control theory Yong and Zhou [2].

1.1 Introduction
